

```
//SIT 55 : ASSIGNMENT 10 : FILE HANDLING
/*Department maintains student's database. The file contains roll number,
name, division and address.
Write a program to create a sequential file to store and maintain student
data. It should allow the
user to add, delete information of student. Display information of
particular student. If record of
student does not exist an appropriate message is displayed. If student
record is found it should
display the student details.*/
